

Partial Fix To The Image Problem

Posted by Relic - 2012/12/03 01:39

When you upload a photo file to Relichunting.Net the file is still uploading with no issues however the forum software will no longer display it or the text associated with it.

A fix to this is once you make your post go back in and edit it by taking the {img size=XXX] AND [/img} tags off the link to the picture file. So far that appears to be working and then you can click the link to see the photo.

Give that a try and let me know if it works for you. We will have to use that method until the permanent change can be implemented. It might take several weeks.

You can also link to your Facebook photo pages as well. I'll post some examples below.

Eventually this site will be replaced by a new Relichunting.Net for the final fix.
